

Workshop / Project - Axios and Router Integration for Meeting Calendar App

Objectives:

- **Develop a backend** with **CRUD APIs** for the Meeting Calendar app.
- Integrate the frontend Meeting Calendar app to the backend using **Axios**.
- Implement **Router** for efficient navigation in the Meeting Calendar app.

Additional Notes

- Adjust the tasks' complexity based on your understanding.
- Add extra features or components to enhance the app.
- Create **README files** for both the frontend and backend:

Goal for project:

- **A fully functional frontend application:** Includes the history of development, showcasing the progress and changes made during the development.
- **A fully functional backend API:** Includes the history of development, detailing the updates and iterations throughout the project.
- **README.md files for both frontend and backend:** Provide a clear explanation of the app, its setup process, and its code structure and features.
